

# MEASURING FOR CURTAINS

print this page and follow the instructions

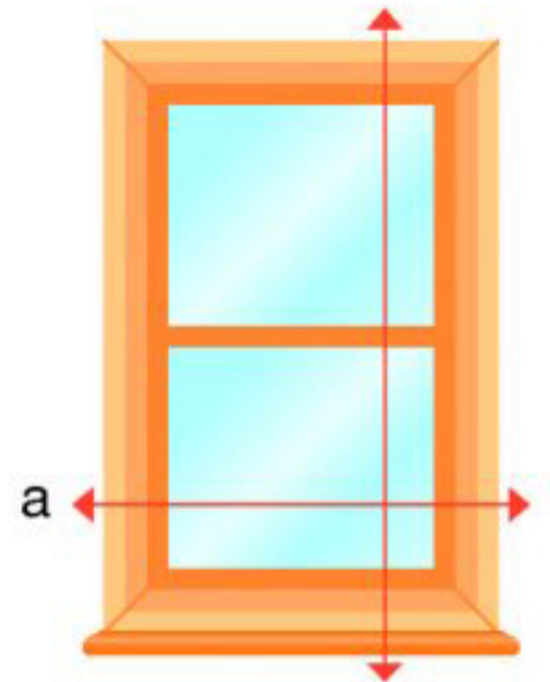

**Important :** We make your order to the exact measurements provided.

**Helpful :  
hints** For the length measurement we recommend placing the top of your track approximately 100mm above the top of your window frame. Measure from this point to the desired length you want the curtain.

For the width, take a measurement from the left to right of the outside window frames architrave, then add to this measurement an extra 20% minimum to accommodate for the curtains stacking off the window when fully opened.

For a pair of curtains you would centre the track where possible. For a single curtain you would offset the curtain track to one side.

For a better understanding watch our tutorial video on how to measure for curtains.
